OF
DEMOCRACY**

Thinking in Decades: A New Frame for Campaigns

Thinking in Decades: A New Frame for Campaigns

Step 1: Forecasting State Trends and Competitiveness

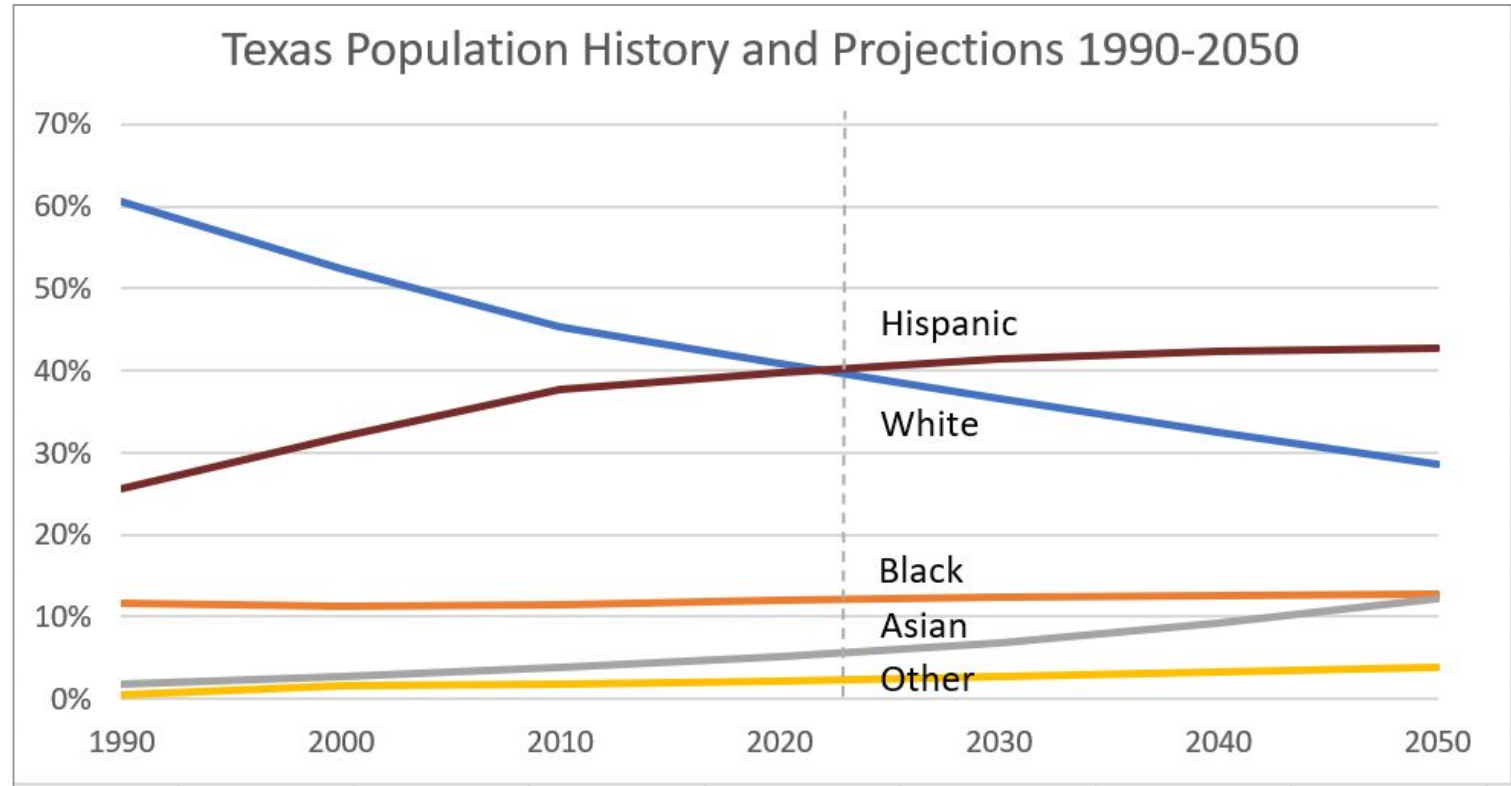

Step 2: State Leg. Trends and Tipping-Point Districts

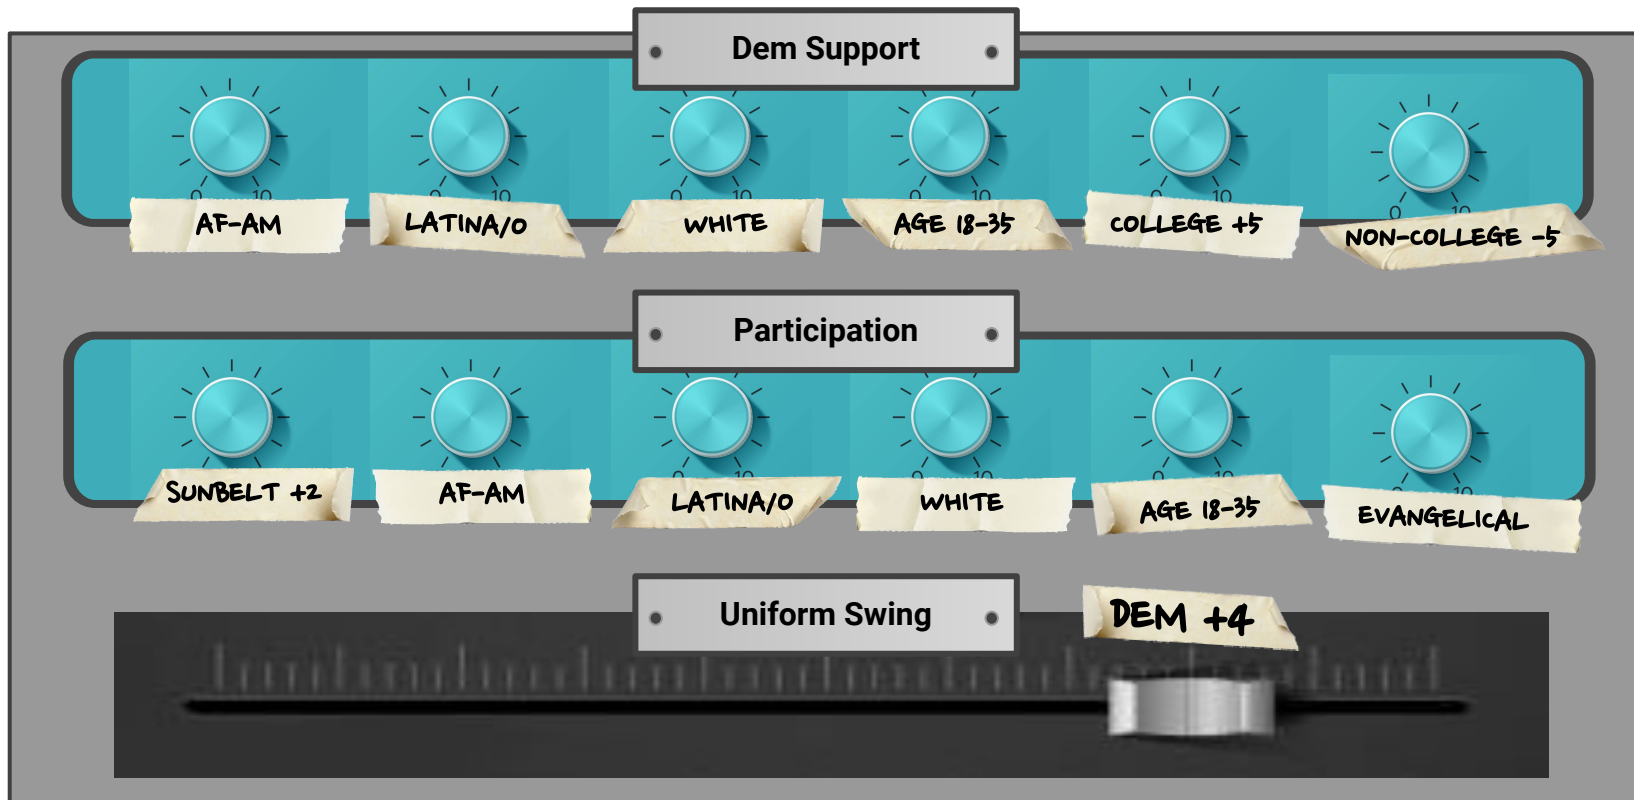

**Step 1: Build a
ten-year projection of
partisan trends and
competitiveness in all
50 states**

Start with demographic trends

Sources: Decennial US Census; Texas Demographic Center (January, 2019)

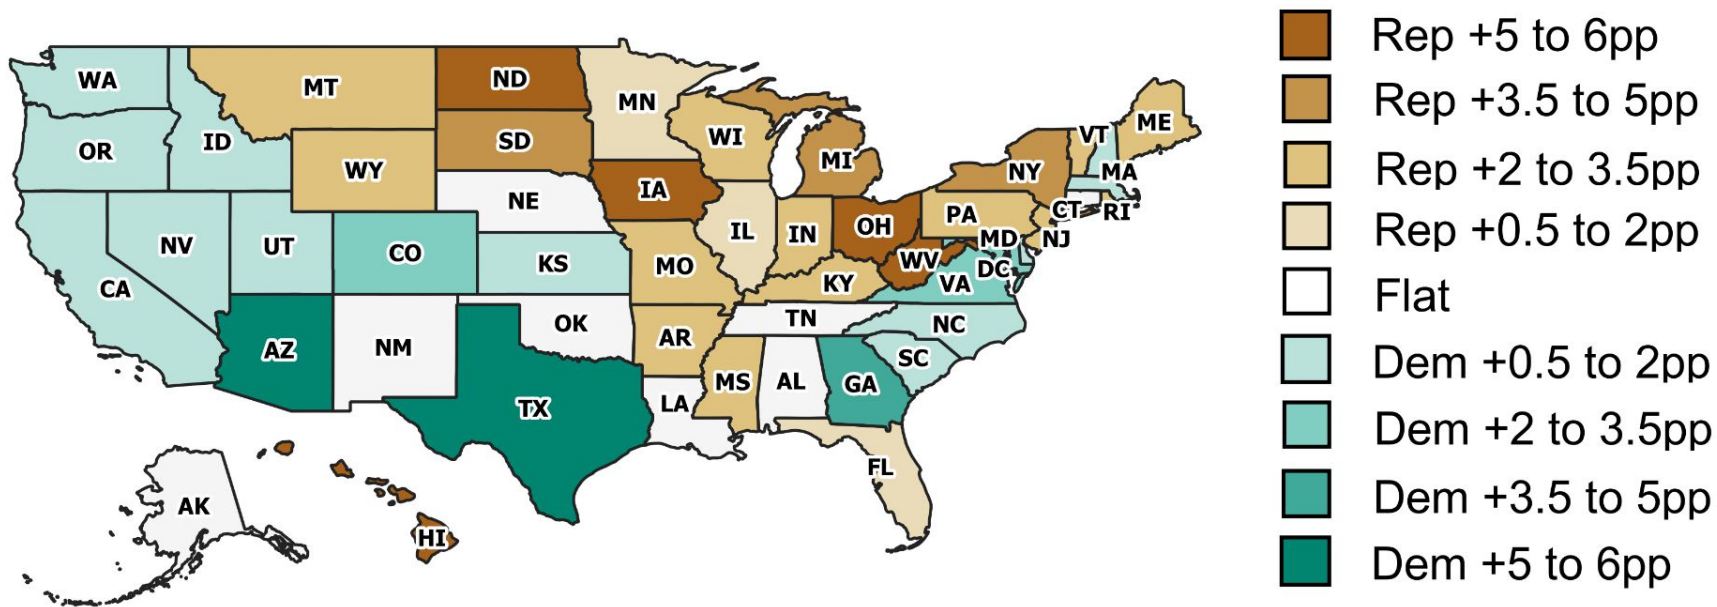

Next, run through 100+ electoral scenarios

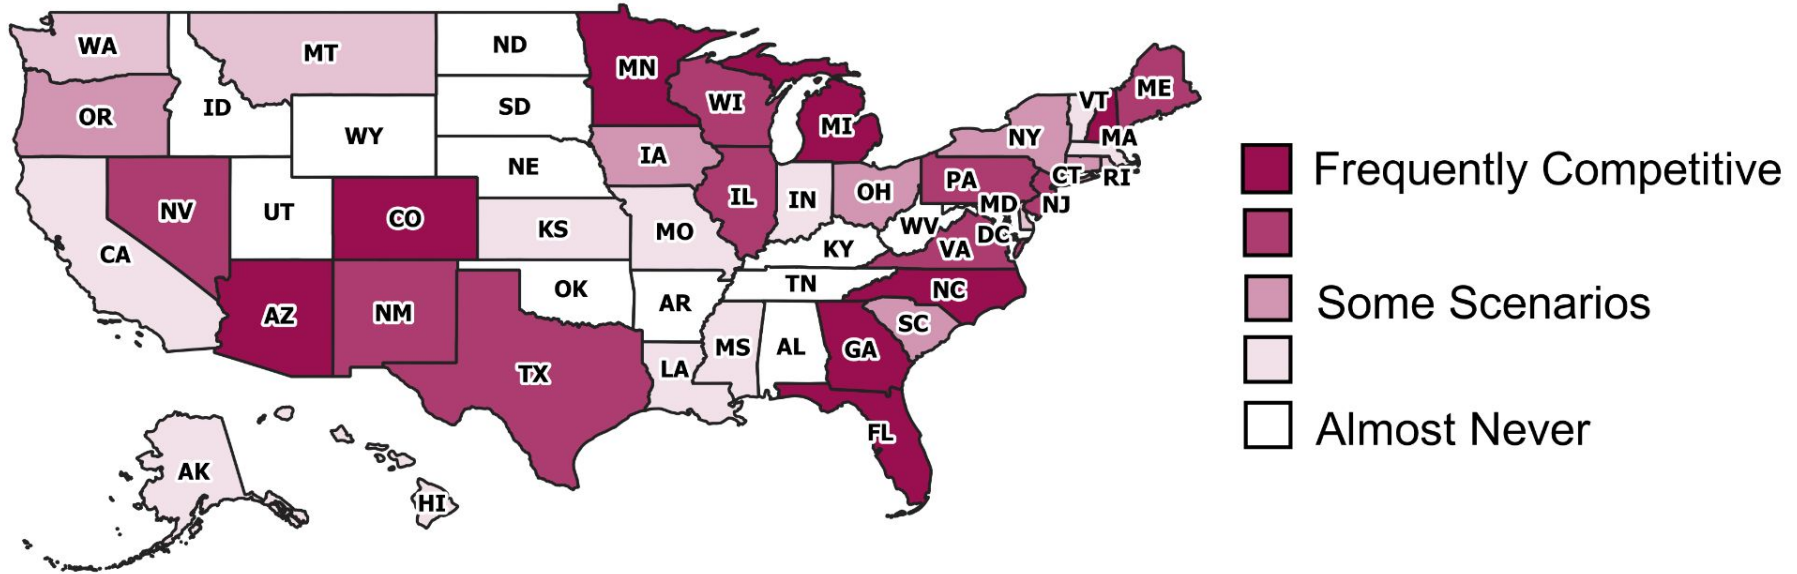

What drives electoral change in the states

Factor #1: National partisan mood or “uniform swing”	The entire electorate swings due to macro factors such as the state of the economy	By far the biggest factor in any single election cycle, can make large plus or minus swings from cycle to cycle
Factor #2: Voter alignment	Voter subgroups change their party or candidate support (examples: growing education polarization, Latino support)	Second-biggest factor in an election year, can shift from cycle to cycle, can result in durable long-term changes if realignments stick
Factor #3: Demographic trends	Maturation, mortality, and migration of subgroups over time	A much smaller factor in a single election cycle but changes accumulate over time and can be transformative over decades

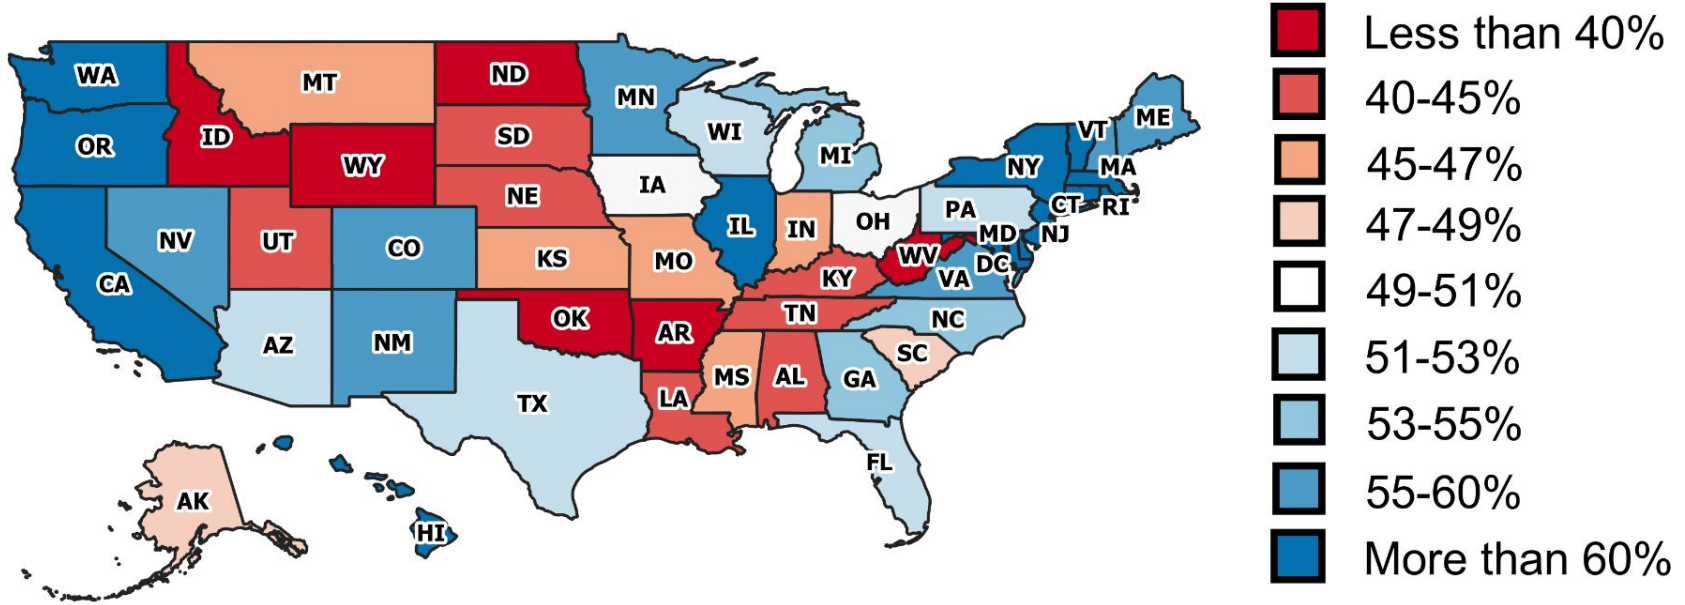

Projected Partisan Trends: 2020 to 2030

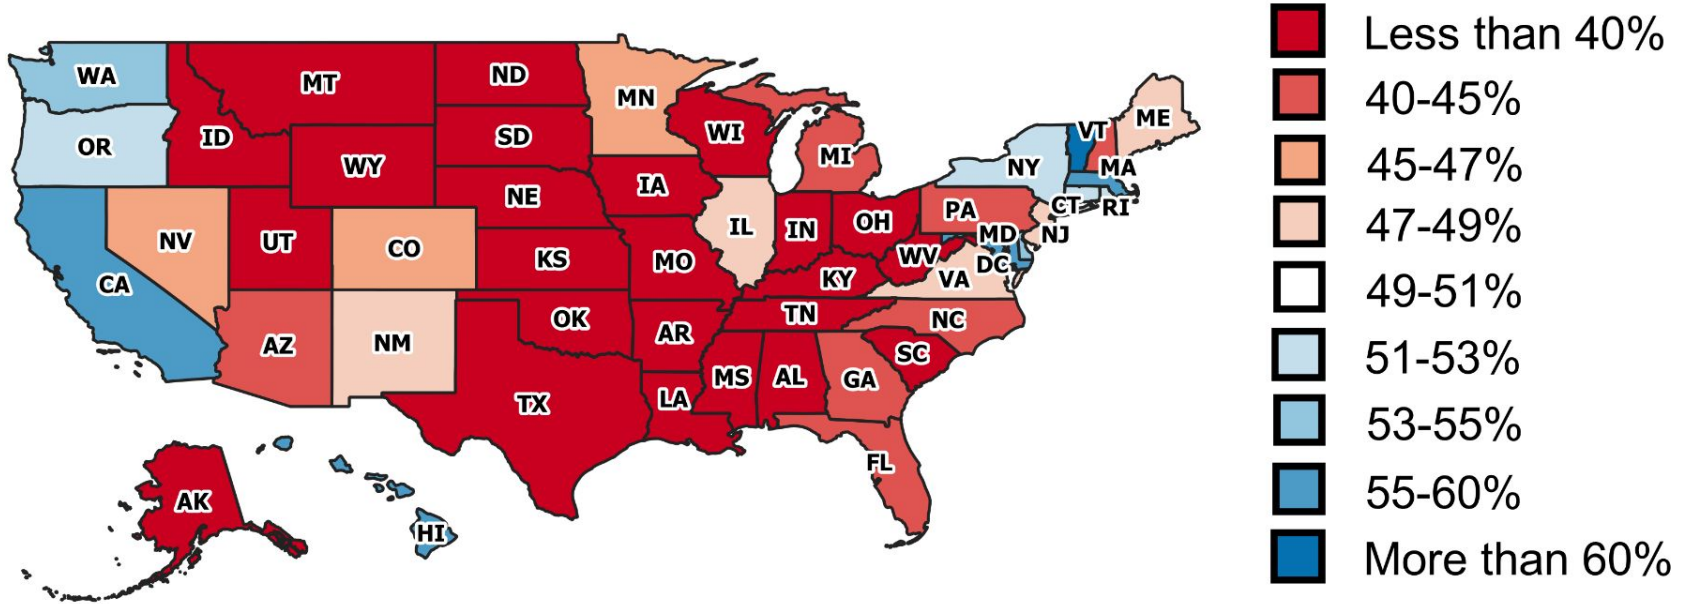

Scenarios: Frequency of Competitiveness

Very Good Year for Dems (Analogous to 2018)

Very Bad Year for Dems (Analogous to 2014)

What moves the needle in Texas

- **Time favors Texas.** We expect the state to be +5pp more Democratic in ten years, second only to Arizona in rate of improvement.
- **2nd fastest growing state.** Most international migrants are coming from Asia while the largest group of domestic migrants are from California; both groups strongly lean Democratic.
- **Sensitive to movement in support among voters of color.** Both broad movement in support levels among voters of color and movement only among Latino voters has a statewide impact on performance.
- **Room for growth among college-educated voters.** Like other southern states, college White support is lower in Texas than in northern states.

Comparison: Non-College White support -1 pp

How much each cohort would have to increase in Dem support if it alone had to counterbalance white support dropping by 1 point:

Race/Ethnicity	College	Non-College
Latino/a	+3.8 pp	+1.4 pp
Black	+5.1 pp	+2.9 pp
Asian	+9.0 pp	+20.2 pp
White	+0.9 pp	-1 pp

Comparison: College support +1 pp

How much Dems could lose in support among non-college voters if support among college educated voters increased by 1 point:

Race/Ethnicity	College	Non-College
All	+1 pp	-0.8 pp

Comparison: Latino/a turnout + 1 pp

How much each cohort could lose in Dem support if it alone counterbalanced Latino support increasing by 1 point:

Race/Ethnicity	Voter Participation
Latino/a	+1 pp
Black	-2.8 pp
Asian	-9.4 pp
White	-1 pp

Winning statewide in 2030

- Holding everything else equal, we expect Texas to be ~5 points more Democratic on margin in 2030 than 2020.
- That will put TX at 47-48% Dem performance statewide in a neutral year. A strong year for Democrats, analogous to 2018 or even 2020, would put the state in play without any state-specific boosts.

Example winning scenarios in 2030

Cohort	Support	Share of Electorate
Asian	71% (+5)	4%
Black	96% (+5)	14%
Hispanic	63% (+5)	26%
White college	42%	28%
White non-college	26%	26%

Cohort	Support	Share of Electorate
Asian	66%	4% (+2%)
Black	91%	14% (+2%)
Hispanic	58%	26% (+2%)
White college	44% (+2)	28%
White non-college	28% (+2)	26%

National Strategic outlook

- Overall we see a more defensive outlook for Democrats in the coming decade, with losses in bad years cutting deeper than gains in good years
- Midwest remains competitive through the decade
- Democrats should also be prepared to defend some western and northeastern states, especially in bad years
- Limited but clearly-defined playing field for growth in the sunbelt, with time being a factor in our favor

Step 2: Map trends to state legislature maps

How scenarios impact district competitiveness

HD	Region	+5pp non-college, +5pp voters of color	+5pp college, -5pp non-college	Summary
55	Temple/ Central Texas	 <p>50% Dem (Rank 4)</p>	 <p>46% Dem (Rank 13)</p>	Diverse district, nat'l avg. college-educated (40%), sensitive to scenarios, needs favorable to be competitive
66	Suburban Dallas	 <p>51% Dem (Rank 1)</p>	 <p>51% Dem (Rank 6)</p>	Less diverse (71% white) and large college-ed (59%) pop. makes district competitive under most scenarios/ not sensitive
74	Del Rio and far west Texas	 <p>57% Dem (Rank 13)</p>	 <p>50% Dem (Rank 3)</p>	Large Latinx (62%) district is likely safe but small college-ed pop. (31%) makes district sensitive to non-college decline

Demos of Tipping-Point Districts in TX House

Demographic	Tipping Point	Non-TP	Difference
Dem 2-way	48%	48%	0%
Black %	11%	13%	-3%
Hispanic %	18%	24%	-6%
White %	64%	57%	7%
Asian %	6%	4%	2%
Other %	1%	1%	0%
College %	51%	43%	8%
Non-College %	49%	57%	-8%
Catholic %	52%	52%	0%
Evangelical %	50%	52%	-2%
Democrat %	50%	52%	-2%

Comparing Chambers

Chamber competitiveness in the year 2030

State Chamber	Seats representing a majority	2030 Dem Baseline of majority-making seat in a neutral year	Dem Swing Required to flip chamber
AZ Leg	16	48.8%	1%
GA House	91	44.8%	5%
MI House	56	47.2%	3%
MI Senate	20	47.9%	2%
NC House	61	48.7%	1%
NC Senate	26	45.5%	5%
PA House	102	47.8%	2%
PA Senate	26	46.9%	3%
TX House	76	45.9%	4%
VA House	51	55.1%	-5%
VA Senate	21	56.7%	-7%

Marrying Strategy & Program
